The portfolio is suited to investors with a high risk profile with a tolerance for capital volatility over the short to medium term and a five year or longer investment horizon.

Specific risks

Liquidity risk is high given the low turnover on African equity markets. This could delay the ability of the fund to meet redemption requests especially in volatile market conditions. Political risk which is elevated on the continent requires further consideration.

This portfolio is permitted to invest in foreign securities which, within portfolios, may have additional material risks, depending on the specific risks affecting that country, such as: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of market information. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. Investors are reminded that an investment in a currency other than their own may expose them to a foreign exchange risk.
